

URECO

hygienic urinal sleeve system

The protected technology behind the Ureco uses hydraulic physics to create a highly effective odour lock, preventing unpleasant smells from the drains reaching the washroom.

How it works:

As urine passes through and around the 'Bio-cap' a small amount of Bio is eroded into the solutions, activating the enzyme which breaks down the uric salts and lime scale. This results in a completely harmless and eco-friendly bacterium which eliminates the need for strong chemicals and cleaning agents. The Ureco also emits a powerful minty type fragrance which reduces the need for harmful aerosols and air fresheners.
